Legal Description of Property			

This waiver is being to release Central Texas Metal Roofing Supply Co., Inc. of any liability in the event the Non-Striated roofing material utilized on the above referenced project, and all additional orders specified as Non-Striated for the same project, is rejected for "Oil Canning" by the owner, architect, sub-contractor, or general contractor. Flat surfaces without striations or stiffening ribs may display a slight waviness commonly referred to as "Oil Canning".

Our experience with the product without striations has been excessive "Oil Canning" due to the stress the panel is exposed to during fabrication and installation. When striations are utilized, the flat of the pan is stabilized to such a point that the "Oil Canning" is reduced. The phenomenon is caused by steel mill production tolerances and **will not be accepted as a cause for rejection**. Central Texas Metal Roofing Supply recommends that these panels have striations to reduce "Oil Canning".

Central Texas Metal Roofing Supply's intent is to provide a high quality product, which will be acceptable to all concerned. Please be aware that production cannot begin until this waiver has been signed and returned.

If this waiver is signed by the contractor or architect only, they are authorizing production as an agent for the property owner and shall accept responsibility as such.
